MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

Thu Sep 2 11:18:27 1999; MasPar time 8.07 Seconds 60.852 Million cell updates/sec

ular output not generated.

Description:
Perfect Score:
Sequence: >US-08-599-226-3 (1-9) from US08599226.pep 66 1 QRYNRAPYX 9

Scoring table: PAM 150 Gap 15

Searched: 179066 seqs, 54579741 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database:

Stàtistics: Mean 22.838; Variance 29.153; scale 0.783

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Title:
Description:
Perfect Score:
Sequence: >US-08-599-226.4 (1-12) from USUB599226.pep 66 1 VSYLSTASSLDX 12

Scoring table:

PAM 150 Gap 15

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37 1:swissprot

Statistics: Mean 24.203; Variance 24.721; scale 0.979

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"NUCLECTIDE sequence and expression of the mercurial-resistance operon from Staphylococcus aureus plasmid pI258.";

PROC. NATL. ACAD. SCI. U.S.A. 84:5106-5110(1987).

-:- FUNCTION: RESISTANCE TO HG(2+) IN BACTERIA APPEARS TO BE GOVERNED BY A SPECIALIZED SYSTEM WHICH INCLUDES MERCURIC REDUCTASE. MERA PROTEIN IS RESPONSIBLE FOR VOLATILIZING MERCURY AS HG(0).

-:- CATALYTIC ACTIVITY: HG + NADP(+) + H(+) = HG(2+) + NADPH.

RT identification of a related gene on chromosome 15.";

RT GENOMICS 22:273-280(1994).

CC :-- FUNCTION: THE FUNCTION OF BRAIN MAPS IS ESSENTIALLY UNKNOWN.

CC PHOSPHORYLATED MAP1B MAY PLAY A ROLE IN THE CYTOSKELETAL CHANGES THAT ACCOMPANY NEURITE EXTENSION. POSSIBLY MAP1B BINDS TO AT LEAST CC TWO TUBULIN SUBUNITS IN THE POLYMER, AND THIS BRIDGING OF SUBUNITS CC MIGHT BE INVOLVED IN NUCLEATING MICROTUBULE POLYMERIZATION AND IN CC :-- SUBUNIT: 3 DIFFERENT LIGHT CHAINS, LC1, LC2 AND LC3, CAN ASSOCIATE CC SUBUNIT: 3 DIFFERENT LIGHT CHAINS, LC1, LC2 AND LC3, CAN ASSOCIATE WITH MAP1A AND MAP1B PROTEINS.

CC WITH MAP1A AND MAP1B PROTEINS.

CC WITH MAP1A AND MAP1B PROTEINS.

CC REGION IS RESPONSIBLE FOR THE BINDING OF MAP1B TO MICROTUBULES CONTROL TN UTEND AND TN TWO TOO.

-I- FUNCTION: RNASE PH IS A PHOSPHOROLYTIC EXORIBONUCLEASE THAT
REMOVES NUCLECOTIDE SESIDUES FOLLOWING THE -CROATEMUNUS OF T
AND ADDS NUCLECOTIDES TO THE ENDS OF RNA MOLECULES BY USING
NUCLEOSIDE DIPHOSPHATES AS SUBSTRAIES (BY SIMILARITY).

-I- CATALYTIC ACTIVITY: TRNA(N+1) + ORTHOPHOSPHATE = TRNA(N) +
A NUCLEOSIDE DIPHOSPHATE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RNPH_MYCTU

at position 105, arginine, monomethylarginine, and
dimethylarginine occur in the ratio 4:4:1
rats have two myelin basic proteins; the smaller one,
shown above, is missing 40 residues (following residue
114 or 115) with respect to the larger ones from other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the sequence reported for this encephalitogenic peptide differs from that shown by a transposition of residues 47 and 48; two other differences are printing errors
